Evergreen Nursery

F. C. HETZ, Proprietor

FAIRVIEW,
ERIE COUNTY, PA.

INTRODUCTION

To my friends, old and new:

I am in the Nursery business alone—no company or corporation.

I own the land upon which I grow my stock.

My terms are cash unless satisfactory arrangement is made before shipment.

All stock is dug and shipped direct from field; no stock stored for months in mouldy cellars.

Large trees are shipped with ball and burlap.

I charge for boxing at actual cost.

Stock is guaranteed to be true to name. While I exercise the greatest care to have stock true to name, I will in no case be liable for any sum greater than the purchase price.

All stock selected and marked by customer at the nursery will be charged for at its actual value; prices in this catalogue will not govern such stock.

All spreading trees will be measured by spread not height.

I have some varieties of Evergreens up to ten feet in height. If interested in large trees write for prices.

Copy of Certificate of Inspection with every order.

General Planting Instructions

CARE OF STOCK ON ARRIVAL:

When you receive your trees and plants, plant them as soon as possible. Do not allow them to lay around and dry out. Open the bundles, remove the packing materials and bury the roots in some shady place, packing the soil well around them so the air cannot possibly reach the roots. But remember, the sooner your trees and plants are in their permanent places, the better it will be.

Be sure to have your ground in good condition before planting. Prepare it in the same manner as you would for planting a field of corn and have the holes dug large enough to admit the roots in their natural position. If the roots are crowded, you will be sure to lose the tree.

When you have the tree in the hole, fill it about half full of soil and tramp it solid. Then, if the ground is dry, pour in about a half bucket full of water and let it settle. Then fill the hole with mellow dirt and tramp it solid. If the soil around the tree is not solid, the wind will cause the tree to sway back and forth, thus forming an opening so that the air can reach the roots and kill them. However, the soil on top should be loosened to the depth of about an inch to prevent the ground from baking and to conserve moisture. Do not use manure or fertilizer.

Cultivate your evergreens as you do your corn.

Do not use manure or fertilizers for trees.

Do not allow dogs to get to evergreens.

Put a wire screen around them.

Evergreens need a bath. Turn the hose on them full force, and keep them clean.
